SUMMARY

Backend Developer with 3 years of production fintech experience and extensive hands-on DevOps experience. Builds C# and ASP.NET APIs, manages Ubuntu/Linux servers and Docker containers, configures Nginx reverse proxies, and automates CI/CD deployments through GitHub Actions. Applies software-engineering discipline to infrastructure configuration, Bash and PowerShell automation, and deployment pipelines. Uses a practical AI-assisted software development workflow to support coding, refactoring, investigative development, and prompt engineering. Backed by Google IT Support and IT Automation with Python certifications.

EXPERIENCE

Xentra Infotech Solutions Inc. (Remote) | Backend Developer

Mar 2023 – May 2026

- **Cut API latency by 98%** — Migrated payment services from MySql.Data to MySqlConnection on AWS, reducing worst-case query times from ~60 seconds to under 1 second. Profiled slow queries and tuned indexes on high-frequency access patterns to eliminate a critical production bottleneck.
- **Shipped 1,100+ commits across 17 repositories** — Built ASP.NET Web APIs, gRPC endpoints, SignalR hubs, and RabbitMQ messaging for fintech products spanning payments, cash management, and access control. Configured Serilog for centralized structured logging across environments.
- **Hardened service security** — Implemented JWT, OAuth 2.0, and OpenID Connect with RBAC and ABAC authorization. Maintained zero high or critical Snyk findings on production deployments through proactive dependency scanning and secure code review.
- **Slashed read latency by 40%+** — Designed EF Core and Dapper data layers for high-throughput financial transactions. Tuned SQL indexes and integrated Redis caching on frequently accessed reference data, reducing read latency by over 40%.
- **DevOps infrastructure and deployment** — Managed Ubuntu/Linux servers; configured Nginx reverse proxies, Let's Encrypt SSL, and UFW firewall rules. Built Docker images with multi-stage builds and automated CI/CD deployments through GitHub Actions. Wrote Bash and PowerShell automation scripts for backups, log rotation, and environment bootstrapping.
- **AI-Assisted Development Experience** — Uses LM Studio, OpenCode, and Codex daily for coding, refactoring, investigative development, and prompt engineering. Works with preferred local models including Qwen 3.8, DeepSeek V4 Flash, and Qwen 3.5 (9B, 27B) for local LLM workflows.

TECHNICAL SKILLS

BACKEND & LANGUAGES

C#, ASP.NET, .NET 6/7/8/9, EF Core, Dapper, REST, gRPC, SignalR, Microservices, JavaScript, TypeScript, Python, PHP

DATA & MESSAGING

MySQL, MariaDB, PostgreSQL, SQL Server, MongoDB, Redis, RabbitMQ, Serilog, Query Optimization

CLOUD/DEVOPS

AWS (EC2, RDS, S3), Docker, GitHub Actions, CI/CD, Nginx, Let's Encrypt, Linux (Ubuntu), Bash, PowerShell

AI-ASSISTED DEVELOPMENT

Local LLM Workflows, Prompt Engineering, Code Generation, Refactoring, Investigative Coding, Developer Productivity

SECURITY & AUTH

JWT, OAuth 2.0, OIDC, RBAC, ABAC, Snyk, OWASP Top 10, SSL/TLS

TESTING & TOOLS

xUnit, Moq, Git, GitHub, Postman, Swagger/OpenAPI, Code Review, Runbooks

EDUCATION

La Consolacion University Philippines — BS Information Technology (2019 – 2023)

La Consolacion University Philippines — STEM, Science Technology Engineering and Mathematics (2017 – 2019)

CERTIFICATIONS

Google IT Automation with Python — Coursera · RFS2G5ZT9GPK

Google IT Support — Coursera · NEBB575RT5LU

API Security Fundamentals — APIsec University (Aug 2023) · FA69CEB39205E003

OWASP API Security Top 10 — APIsec University (Aug 2023) · FC46A72A0806A19E

LANGUAGES

English — Professional working proficiency

Filipino (Tagalog) — Native proficiency
